This new line of instruments represents the finest development of small size pivoted moving coil, permanent magnet type of instruments.

They embody characteristics which have made the well-known Weston Standard famous throughout the world. They are accurate, dead beat and extremely sensitive.

They may be left continuously in circuit at full load and are shielded against external electrical and magnetic influences.

They are substantially constructed and have the longest scale ever provided in instruments of similar size.

The prices are surprisingly low for instruments of such quality.

The several models and ranges offer a selection from over 300 different combinations. They are listed in BULLETIN No. 8, WHICH WILL BE MAILED UPON REQUEST.
